

SCHWEGO® aqua fix 8111

Cleaner for fountain solution circulations

Function Even in case of optimum filtration and conservation, germ formation will be a topic in fountain solution circulations again and again. This will lead to substantial trouble in the printing process in most cases.

SCHWEGO® aqua fix 8111 cleans the dampening water system gently and intensively at the same time. It is ideal for cleaning the dampening systems, especially for cleaning turbo dampening systems.

The quarterly remove can take place every six months, thus shift capacities are kept free.

Properties

- Intensive cleaning of the fountain solution circulation
- Deposits are removed and flushed out
- 0,7% VOC
- Regular cleaning will prevent the building up in pipes and ducts
- Certified by ISEGA for food packaging

Application Periodic cleaning of the dampening water circuit with SCHWEGO® aqua fix 8111 should be carried out, especially with IPA-free printing.

Add 10% SCHWEGO® aqua fix 8111 into the fountain solution circulation, filled with fresh water. Rinse the system for about 2-3 hours.

If possible, close the return unit and rinse once with water and 10% fountain additive

Storage Subject to appropriate storage, the described properties of SCHWEGO® aqua fix 8111 remain stable for at least 12 months.

Packaging 10 kg canister
