

SCHWEGO® sorb 8225

Ink and oil absorber for fountain solution circulations

Function SCHWEGO® sorb 8225 is a pad and consists of a water-repellent special fibre which will attract ink and oil residues.

Soilings in the fountain solution circulation, which are to be found especially in job printing by ink and washing agents in connection with continuous-feed damping systems, are effectively absorbed.

The pad will float on the surface of the water and take up the oily components.

Properties

- Ink and oil components are absorbed
- High efficiency by large absorbing surface
- More stable production run behaviour by reducing the foreign substances
- Reduced cleaning costs
- Fixing lugs

Application SCHWEGO® sorb 8225 is fastened at a suitable place in the retention basin of the fountain solution circulation. The pad should float on the surface of the water in order to take up the dirt accumulations floating on the surface as well.

It should be exchanged depending on the degree of soiling of the filter.

Packaging 1 packaging unit = 10 pcs.
