

SCHWEGO® calci clean 8179

Roller shampoo which removes calcium residues

Function: Components of ink, fountain water and paper will form deposits in the pores of the inking and damping rollers. Especially calcareous deposits will impair the emulsion formation of printing ink and fountain water and can even lead to a roller running blind.

Conventional roller washing agents on the basis of mineral oil will show hardly any effect in case of deposits of this kind. **SCHWEGO® calci clean 8179** will dissolve these deposits, regenerate the surface of the rollers and assist a stable emulsion formation.

Properties:

- Deep cleaning of the pores of inking and damping rollers
- Lime scum of ink, paper and fountain water is dissolved
- Improves the ink and fountain water transport
- Biodegradable
- Prolongs roller life

Application:

Apply **SCHWEGO® calci clean 8179** after the usual roller washing on the rotating rollers. Squeeze after about 2-3 minutes with water. Then clean again with washing agent.

It is recommended to apply a further treatment with **SCHWEGO® plus 8441** for regenerating and deeply cleaning the rollers.

Tip:

We recommend to use **SCHWEGO® calci Clean 8179** once a week, especially when printing with reduced alcohol or without any alcohol.

Subject to appropriate storage, the described properties of **SCHWEGO® calci clean 8179** remain stable for at least 24 months.

Packaging:

SCHWEGO® calci clean 8179 : 1 l bottle

Also available as gel:
Schwego calci gel 8180 2 kg bucket
