

SCHWEGO® start 8182

Ink refreshener and start spray

Function In case of prolonged machine standstills the printing ink on the rollers and blankets shows a tendency to piling. The ink begins to dry, becomes sticky and tacky, which will lead to problems especially if the machine is started again without any washing of the blankets.

SCHWEGO® start 8182 is sprayed on the ink rollers and blankets before starting the printing process and this way it will take away the stickiness and tackiness.

Properties

- Gliding ink consistency when starting to print
- Any sticking of the paper to the blanket will be prevented
- Any picking of the ink is prevented
- Improved ink transfer when the machine is started again

Application **SCHWEGO® start 8182** is sprayed on blankets and ink rollers after the machine stop and right before the machine is started again.

Even for freshly washed and dry blankets **SCHWEGO® start 8182** is recommended as starting aid when printing is started.

Storage Subject to appropriate storage, the described properties of **SCHWEGO® start 8182** remain stable for at least 24 months.

Packaging **SCHWEGO® start 8182** 400 ml spray can

Also available as liquids:
